

ARMBRUSTER ROLLERSORTER

Rollersorter Features

The Armbruster Rollersorter is available in two models, depending on the desired goals. The Single Rollersorter excels at removing large bits of MOG, while the Double Rollersorter provides superior removal for the cleanest fruit possible.

- First gear driven Rollersorter removes jacks, stems and other large particles
- Second level Rollersorter bed with tighter spacing removes any remaining raisins, shot berries and small particles
- Waste falls through the second Rollersorter underneath machine into dejuicing and MOG removal auger (integrated) Rotovib 30 & Double Rollersorter contains a stand-alone auger
- Waste falls through the second Rollersorter underneath machine into dejuicing and MOG removal auger (integrated) Rotovib 30 & Double Rollersorter contains a stand-alone auger
- MOG is conveyed into waste bin, juice is pumped into bin or must pump
- Independent frequency drive speed control for each Rollersorter bed
- For use with hand-picked and mechanically harvested grapes
- Adjustable holes for different sizes of grapes with insertable spacers
- Motor driven with variable frequency drive control
- Both drawers extend for easy maintenance and cleaning; rollers are also easily removed for cleaning

Stand-alone Rollersorter
